Notice For Adding Memory

Please read the following information for two corrections regarding memory modules installed in your VAIO® notebook (PCG-FX290/FX290K). This document replaces specific information in the “Adding Memory” section of the online VAIO® Notebook User Manual that came with your notebook.

1. The following information replaces the first paragraph of the “Adding Memory” section:

> In the future, you may want to install memory modules to expand the functionality of your notebook. The amount of memory pre-installed is 256 MB, utilizing both memory module bays (128 x 2). You can increase memory up to 512 MB (256 MB x 2) by installing optional memory modules (256 MB) in the memory module bays. For memory upgrades, use only PC100 (CL2) SDRAM SO-DIMM (gold lead contacts). See the table below for typical expansion memory configuration.

2. The following information replaces the “Typical expansion memory configuration” table:

Total System Memory (MB)	Slot 1 (MB)	Slot 2 (MB)
384	128	256
512	256	256
